This polypeptide comprises the bispecific tetravalent antibody BiTAb1G10-B7-24H6. The molecule consists of 4 scFvs, i.e. 2 anti B7.1 scFvs and 2 anti B7.2 scFvs (tetravalency). One single BiTAb is a homodimer of 2 identical molecules, each containing both an anti B7.1 and anti B7.2 scFv (bispecificity). An anti-B7.1 and and anti-B7.2 scFv are linked using a charactation domain (see AAW90219), which drives the homodimerisation of the molecule. DNA (see AAW90219) unit and scheen constructed to allow expression of the BiTAb in transformed E. coli cells. The BiTAb cross-links, and/or cross-reacts, with the costimulatory molecules B7.1 and B7.2 that are expressed on the membrane of professional antigency reseming cells, leading to the inhibition of antigen-specific T cell activation. The invention relates to such B7-binding molecules, methods of the immune system, in particular graft rejection, graft versus host disease, allergy and autoimmune diseases (claimed)

The present invention describes a stable anti-CD22 antibody having a VH domain and a VL domain, where the sequences of the VH and VL domains are at least 70% to 90% identical to the a sequence of 244 amino acids at DaG17476) and the antibody comprises at least two amino acid substitutions with respect to ADG17476, Gln replacing Glu at position 6, Val replacing Ser at position 12 or Lys replacing Glu at position 6, the VH domain. Also described: (1) an isolated mucleic acid encoding a stable humanised anti-CD22 antibody described above and that has an LL2 binding specificity; (2) an immunoconjugate comprising a stable anti-CD22 antibody described above; (3) a mucleic acid encoding an immunoconjugate of (1); (4) a method of inhibiting growth of a malignant B cell; and (5) a method of detecting a cell that expresses CD22. The anti-CD22 antibody. has cytostatic activity. The antibodies are useful in diagnosing or treating lymphoma, e.g. B cell non-Hodgkin's lymphoma. The present carding the exemplification of the present invention.
                                                                                                    New anti-CD22 antibody having a VH domain and a VL domain comprising at least two amino acid substitutions, useful in diagnosing or treating lymphoma, e.g. B cell non-Hodgkin's lymphoma.
                                                                                                                                                                                                            Disclosure; SEQ ID NO 6; 66pp; English

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description

GENERAL INFORMATION:

Sequence 169, Application US/10059261

Sequence 169, Application No. US200300778261

Publication No. US200300778261

SEQUENCE INFORMATION:

APPLICANT: BDELMAN, LENA

APPLICANT: BDELMAN, LENA

APPLICANT: BUNENTION: CHIMERIC MOLECULES CONTAINING A MODULE ABLE TO TARGET

TITLE OF INVENTION: FUNCTION OF THE PERMEABILITY TRANSITION PORE COMPLEX

TITLE OF INVENTION: (PTPC)

TITLE OF INVENTION: (PTPC)

FILE REFERENCE: 03495.0216

CURRENT APPLICATION NUMBER: US/10/059,261

CURRENT FILING DATE: 2002-08-29

PRIOR FILING DATE: 2001-02-02

NUMBER OF SEQ ID NOS: 325

SEQ ID NO 169

LENGTH: 331

A, Experimental source: cell line 4Cl1
C, Comment: This protein is an anti-idiotypic antibody that induces an anti-phosphorylchol
C, Superfamily: immunoglobulin v region; immunoglobulin homology
C, Keywords: heterotetramer; immunoglobulin
F,1-19/Domain: signal sequence #status predicted <SIG>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             66 QKFKGKATLTVDKSSSTAYMELRSLTSEDSAVYXCARRGPYGNYYTSYYFDYWGQGTTLT 125

RESULT 15
MHMSJ5
Ig heavy chain V region (J558) - mouse (tentative sequence)
C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Date: 30-Jun-1991 #sequence_revision 30-Jun-1991 #text_change 09-Jul-2004
C;Accession: A26242
R;Schilling, J; Clevinger, B; Davie, J.M.; Hood, L.
Nature 283, 35-40, 1980
A;Title: Amino acid sequence of homogeneous antibodies to dextran and DNA rearrangements
A;Reference number: A26242; MUID:80078170; PMID:6765983
A;Residues: 1-117 <SCHA
A;Molecule type: protein
A;Residues: 1-117 <SCHA
A;Molecule type: protein
A;Residues: UNIPROT:P01757
A;Note: the sequences of 10 hybridoma proteins that also bind dextran differ from that E
C;Comment: This protein binds dextran.
C;Comment: This protein binds dextran.
C;Comment: This protein binds dextran.
C;Comment: manunoglobulin v region; immunoglobulin homology
C;Keywords: heterotetramer; hybridoma; immunoglobulin
F;15-98/Domain: immunoglobulin homology <IMM>
F;22-96/Disulfide bonds: #status predicted
